

Router Link Stat & SNMPv2

Inventor: Satan

Year: ~2010

<https://0x8.ch/HackersCardgame12>

Using a Network Monitoring Software like RRD, zabbix or zabbix to monitor your gear is on one hand a good idea, if someone downloads gigabytes of data from some of your computers you would maybe notice that and ask legitimate question, even when satan does not like questions, especially not legitimate questions. On the other hand it's also not such a great idea, at least not with SNMPv2. LinkStat is only one bit, but it would tell Satan, that you just enabled your laptop and if he has something like the m98 card he can guess, that you are now just in front of your laptop. If the router or the switch that has also SNMPv2 is hacked SNMPv3 would also not make a big difference, on one hand YAY, on the other hand not that much of a YAY, but I'm Honey Pot anyway...

Military Fiber Network in Switzerland

NPC

Inventor: ???

I did not really knew, that swiss army has a fiber network, i heard that but it was just something i heard. In 2013 the **Schulkommandant** of Waffenplatz Wangen materialized at Schachenhalle where i had a job at **PrimeVision AG**. I normally went outside to smoke a cigaret (smoke1 card). I began to talk with him and i used some sort of **Social Engineering**: I asked "What are the fiber networks of the army used for?" (i did not knew that they really exist) then he just made two mistakes in one sentence: "They are used for the Marschbefehle". First he told me: "Yes there are army fiber Networks in switzerland" second he does not seem to be a gifted **liar**: "**Marschbefehle** are more or less small Word documents..." maybe they use it for something else... i again ended up in m19.

Year: ~xxxx

https://0x8.ch/HackersCardgame12

A photograph of a man with short hair and a beard, wearing a maroon long-sleeved shirt and blue jeans, standing next to a tall, dark server rack in a data center. He is pointing towards the rack with his right hand. The server rack has multiple horizontal bays filled with server units. In the background, there are more server racks and a white tiled floor. On the left side of the image, there is a teal vertical bar containing a white skull-and-crossbones logo and the text "Swiss Military Mainframe". On the right side, there is a black vertical bar containing the text "Inventor: ???? Year: ~XXXX" and a URL "https://0x8.ch/HarkensCardgame12". At the top right, there is a large white number "44" with a small yellow arrow pointing to it from below. The overall image has a slightly grainy, documentary feel.

Neuralink™

t40

Year: 2020

Inventor: Elon Musk

Red Cards = mostly honest cards. Source:
<https://www.youtube.com/watch?v=r-ybh3t7WVI>

I'm not sure what Elon's plan is, but i'm sure the NSA/CIA would like to make a #HoneyPOT out of that Product and even blame Elon if things go wrong, that are maybe caused by another smaller implant, see microdots t1 card, especially the small ones from Neuronexus on the coin.

If Elon tries to mitigate the problems the older implants causes this would be really great.

Forgotten or just above top secret
